**Nature's Biological Dethatcher** contains a proprietary blend of Carbonic Enzymes and Bacterial Species designed to help break down and decompose Thatch, Grass Clippings and Compost.

**Application Directions:** Attach sprayer to a garden hose and turn to "Mix/On". Turn the water on to about  $\frac{3}{4}$  pressure to avoid sprayer malfunction. Cover all lawn areas, spraying a 6-8' wide swath. *Walk slowly for heavy applications and quickly for light applications.* Wet all lawn areas but do not soak in during the application. Water it into the thatch layer afterwards for about 15 minutes.

**For Heavy Thatch Conditions** use 3 oz per 1000 sf every three weeks. Apply when soils are warm and frost is out of the ground. **For help with Grass Clippings** use 1 oz per 1000 sf monthly. **For Compost Piles** use 1 cup mixed in 1-2 gallons of water.

**Water Regularly** to keep the soil *underneath* the thatch layer moist as this is where decomposition occurs. For compacted or clay soils we recommend using **Aerify PLUS** to help loosen and further bio-activate the soil.

**Storage:** Keep container sealed when not in use. Store between 41° F (5° C) and 77° F (25° C) Warning: Harmful if swallowed. Avoid contact with eyes, skin and clothing. Rinse with clean water. **Safety Glasses are recommended.**
